# **OPERATION INSTRUCTION**

## 1. Brief introduction

This compound feed sewing machine is designed with unique feed mechanisms, which make sewing of uneven and thick materials easily. Smooth, uniform and neat stitches are promised. The machine runs with high speed and low noise thanks for its' vertical-axis rotating hook, sliding lever take-up and synchronized belt driven mechanisms. It is designed for sewing of shoes, caps, sofa and bag, etc, and specially for sewing cylindrical or arc products.

1. Drip oils to the signed position by arrows everyday.
2. Oil the machine before its Initial running or after a long time idle at signed point and, remove top cover A, drip oils to all felts and wicks inside the arm.
3. The hole in read color should be oiled.

7

### 9. Setting the needle (Fig.7)

1. Turn the handwheel to raise the needle bar to its highest point.
2. Loosen needle set screw 2 and have the long groove of the needle 1 face leftward.
3. Insert needle fully.

### 10. Threading the bobbin (Fig.8)

1. Lift the latch 1 and take out the bobbin.
2. Insert bobbin correctly and close the latch.
3. Draw bobbin thread through slot 2, tension spring and hole 3.
4. Bobbin should turn in the direction shown by the arrow when draw the bobbin thread.

9

### 11. Installing the thread tension for bobbin thread winder(Fig.9)

Mount thread tension 1 onto the top cover with set screw 2.

## 12. Winding bobbin thread (Fig.10)

- 1.Thread in sequence ① ~ ④, then wind thread around the bobbin several circles
- 2.Press latch A.
- 3.Loosen screw B to adjust the latch to get the proper thread amount of 80% of the bobbin capacity.
- 4.If thread wound unevenly, move guide C to regulate and fasten with screw D.
- 5.If the proper thread amount acquired, the latch will disengage automatically.

## 13. Threading the needle thread(Fig.11)

Thread in sequence as shown in the illustration.

## 14. Stitch length (Fig.12)

Turn the stitch dial ① leftward or rightward to get your required stitch length.  
Press the reverse lever ② to start reverse sewing, loose it to restore normal sewing.

## 15. Thread tension (Fig.13)

### 1. Tension of needle thread

Turn the tension nut ① clockwise to short the thread remains after cut, turn counterclockwise to lengthen the thread remains.

Turn the tension nut ② clockwise to increase needle thread tension, turn counterclockwise to reduce the tension.

### 2. Tension of bobbin thread

Turn the tension nut ③ clockwise to increase bobbin thread tension, turn counterclockwise to reduce the tension.

## 16. Adjusting thread take-up spring (Fig.14)

### 1. To change the take-up spring swing range

- Loosen set screw ② and move plate ③ to adjust the take-up spring.
- Move plate ③ rightward to increase take-up spring swing range, move leftward to reduce swing range.

### 2. To change the tension of take-up spring

Loosen nut ④, turn shaft ⑤ counterclockwise to increase tension, turn clockwise to reduce the tension.

## 17. Presser foot lift (Fig.15)

1. When the presser foot on the lower resting position, raise the foot lift lever ① as illustration. The presser foot rises 9mm then stop.

2. Lower the lift lever ① to restore the presser foot.

### 18. Pressure of presser foot (Fig.16)

Turn the regulating bolt ① rightward to increase the pressure, turn counterclockwise to reduce the pressure. Tighten nut ② after adjustment.

### 19. Adjusting needle guard plate (Fig.17)

Check the position of needle guard plate after change the rotating hook. The standard position of the guard plate ② is 0.1~0.2mm against needle ①. If the clearance is not right, bend the guard plate to adjust.

1. To bend the guard plate inward, insert a screwdriver outside.
2. To bend the guard plate outward, insert a screwdriver inside of the plate.

### 20. Reset of safety clutch (Fig.18)

In case the rotating hook is applied with a over strong force during operation, the safety clutch start working. The rotating hook stop turn even the handwheel is still turning.

1. Reset the safety clutch.
  - a. Clean the locked thread in the hook
  - b. Press button ① down on the bed, Firmly turn the handwheel reversely at the same time.
  - c. When a "click" sound is heard, the safety clutch is reset successfully.

#### 2. Adjust the force

Turn the screw ② to Direction A to increase the force of clutch and turn the screw to Direction B to decrease the force.

19

## 21. Adjusting hook thread opener (Fig.19)

1. Turn the handwheel in normal direction to move the thread opener ① to its ultimate position.
2. Turn the bobbin cap ② in direction B showed by arrow, to make stopper ③ (the projection part) against the notch under the bottom of the needle plate ④.
3. Loosen the screw ⑤ and move the plate ⑥, adjust the clearance between horn A and the opener to 0.1~0.3mm, tighten the set screw ⑤.

This technical drawing is an exploded view of a mechanical assembly, likely a belt drive system. The components are numbered 1 through 39. The main assembly consists of a shaft (1) with a pulley (2) at one end and a larger pulley (4) in the middle. A belt (38) is shown around pulley 4. To the right, there is a large pulley (29) with a belt (30) around it. A smaller pulley (39) is shown at the bottom right. A dashed box at the bottom left shows a detail of a pulley (34) with a belt (35). The exploded view shows the relative positions of the parts, including various bolts (e.g., 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 31, 32, 33, 36, 37) and washers (e.g., 3, 6, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 31, 32, 33, 36, 37) used to secure the assembly.
